PROFILE

Fullstack developer with experience building scalable web applications using React, Java and SQL. Comfortable working across frontend, backend and cloud environments, especially Linux and Docker based setups. I've worked on a range of projects from healthcare systems to multi-container deployments, which has made me adaptable with different tech stacks. I enjoy learning new tools and expanding my skill set, and I'm motivated to contribute to reliable, enterprise-grade systems while deepening my backend expertise.

EDUCATION

M.Tech. Computer Science and Engineering

July 2022 – May 2024

Indian Institute of Technology Jodhpur, India

CGPA (converted to German grading scale) - 1.5

B.Tech Information Technology (IT)

June 2016 – Oct. 2020

Osmania University, Hyderabad, India

CGPA (converted to German grading scale) - 1.5

EXPERIENCE

Full Stack Developer

July 2024 - Feb 2025

Oculon.ai, Hyderabad, India

- Developed responsive and scalable web applications using React.js and Redux with a focus on clean UI, performance and maintainability.
- Built dynamic dashboards and configurable interfaces, integrating REST APIs for real time data visualization.
- Improved usability and reduced recurring issues by addressing user feedback and refining interaction flows.
- Collaborated with product and QA teams to deliver stable, modular code across frontend and backend components.

Application Development Associate

Dec. 2020 - May 2021

Accenture Solutions, Hyderabad, India

- Worked in a Linux/RHEL environment handling package updates, system checks and application support.
- Used Docker for containerization and deployment across pre-production, production and DR environments.
- Managed Incident, Change and Problem Management tasks following ITSM processes using Jira.
- Gained exposure to CI/CD pipelines built with Jenkins and supported teams during deployment cycles.

PROJECTS

Rakshak - A Remote Healthcare Monitoring System

July 2023 - May 2024

Technologies used: Android (Kotlin), AWS, Python, PHP, MySQL, Arduino

- Built an end-to-end remote health monitoring solution for the Indian Army, enabling ECG, SpO2 and stethoscope data streaming through a secure web and mobile platform.
- Integrated sensor modules, backend services and cloud hosting to ensure reliable data transmission in extreme environments.
- Conducted field tests in high-altitude locations and demonstrated the system at Army headquarters in Mathura.

Multi-Container Docker Deployment with Integrated Web Applications

July 2023 - Nov 2023

Technologies used: Docker, PHP, MySQL, Python (Flask), Apache

- Developed a multi-container Docker setup hosting a PHP web application and MySQL database for student record management.
- Integrated a Flask service to demonstrate inter-container communication within an isolated Docker network.

Security Enhancement in Bitcoin Blockchain

Jan 2023 - May 2023

Technologies used: Java, SHA-256, Merkle Trees, ECDSA

- Implemented enhanced hashing, digital signature verification and Merkle tree optimization to improve security and verification performance.
 - Compared multiple algorithms to assess execution speed, security strength and practical usability.
-

TECHNICAL SKILLS

- Languages: Java, Python
 - Backend: Java, REST APIs, SQL
 - Frontend: React.js, JavaScript, HTML, CSS
 - Platforms & Tools: Linux, Docker, Jira, Git, Jenkins
 - Cloud: AWS
-

LANGUAGES

- English – Fluent
 - Hindi – Fluent
 - Telugu – Native
 - German – A2 (in progress)
-

ACHIEVEMENTS & INTERESTS

- Ranked 1st in M.Tech Computer Science at IIT Jodhpur.
- Awarded by the Indian Army for a healthcare monitoring system prototype.
- Certifications: Flipkart Grid 5.0 (Level 2), AWS Security Fundamentals, Java and Python (IIT Bombay).
- Interests: Singing, sketching, badminton, photography.
